EXPERIMENT-6

NAME: Santhosh Kumar N ROLL NO: 240701807

AIM

To design and develop a mobile-based hotel booking application interface using the Rapid Application Development (RAD) model.

OBJECTIVE

- To understand the RAD development approach
- To design a user-friendly mobile application
- To implement fast prototyping and iterative improvements
- To create an efficient hotel booking workflow

SYSTEM DESCRIPTION

SANZZ is a mobile-based hotel booking application that allows users to:

- Browse available hotels
- View detailed room information
- Select rooms based on preferences
- Add bookings
- Make secure payments

The system is developed using the **Rapid Application Development (RAD) model**, which emphasizes:

- Quick prototyping
- Continuous user feedback
- Iterative development

RAD MODEL PHASES

1. Requirements Planning

- Identify system requirements
- Define user needs and objectives

2. User Design (Prototype)

- Create UI screens (welcome, listing, details, booking)
- Gather user feedback
- Improve design continuously

3. Construction (Iterative Development)

- Develop application features
- Test and refine based on feedback

4. Cutover (Implementation)

- Deploy the application
- Release to users

MODULE DESCRIPTION

1. Splash / Welcome Screen

- Displays SANZZ branding
- Options:
    - Login / Sign In
    - Create Account

2. Hotel Listing Screen

- Search functionality (city, dates, guests)
- Displays popular hotels
- Shows price and ratings

3. Hotel Details Screen

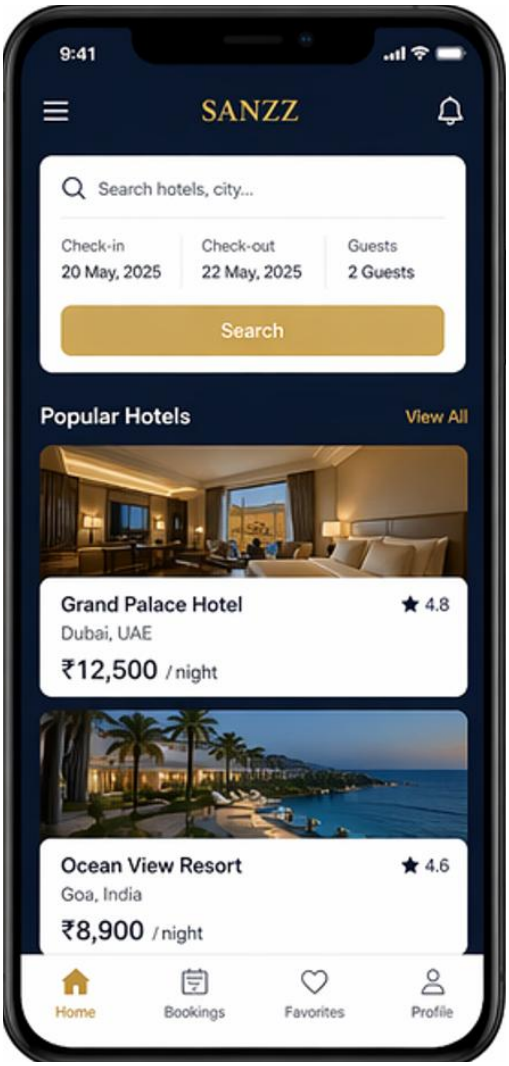
- Displays selected hotel information
- Includes:
    - Images
    - Amenities
    - Description
    - Price per night

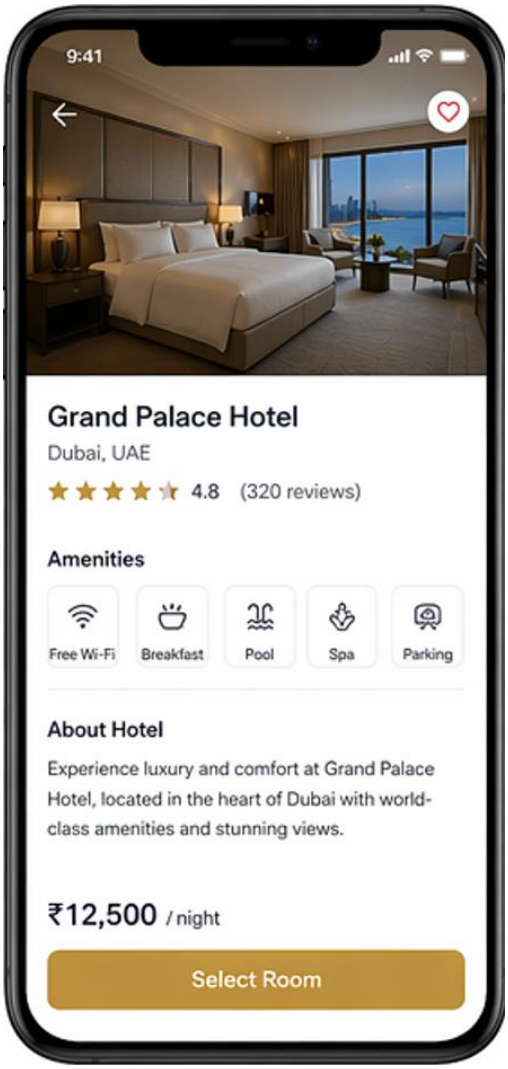
4. Room Selection Screen

- Shows different room types
- Displays:
    - Room size
    - Bed type
    - Price
- Option to select room

5. Booking / Payment Screen

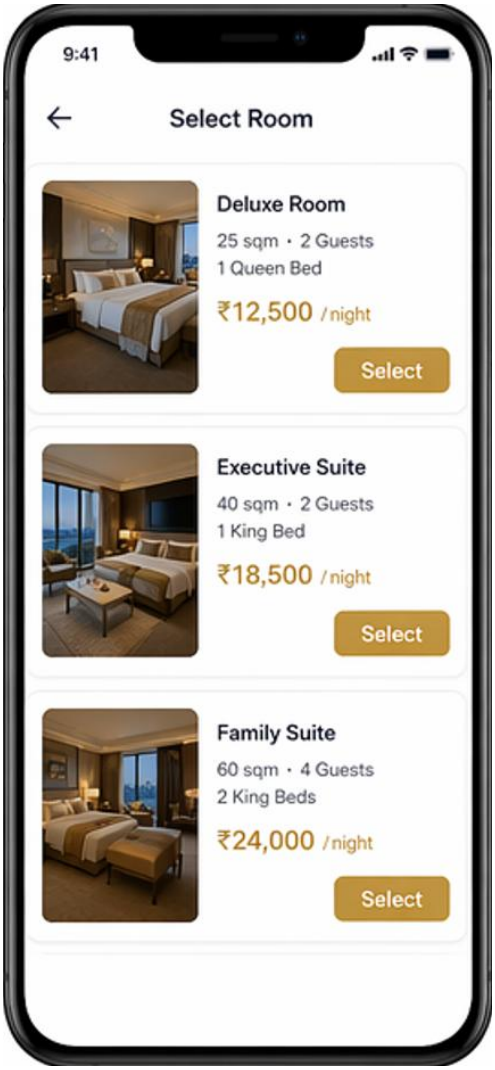
- Booking summary
- Check-in and check-out details
- Payment options:
    - Credit/Debit Card
    - UPI
    - Net Banking
    - Wallet
- Secure payment confirmation

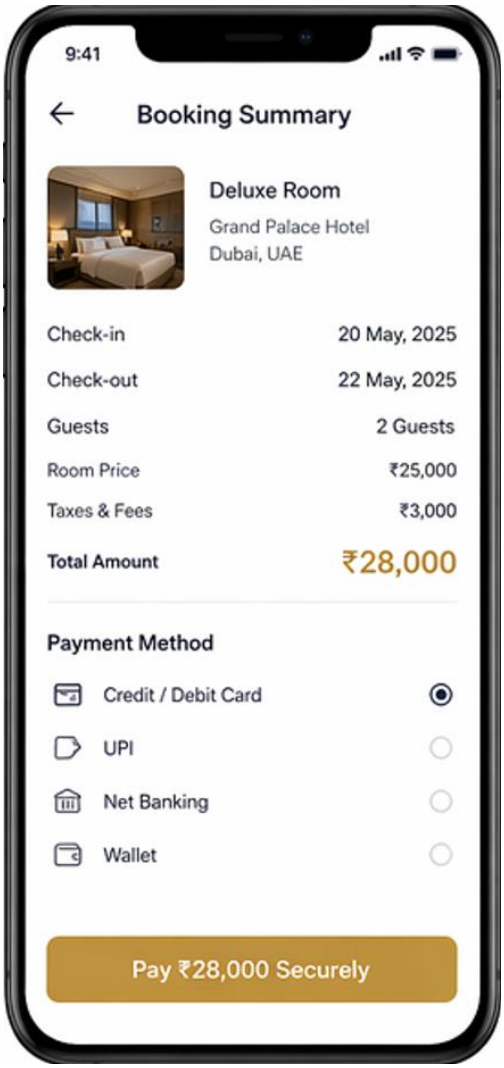




UI DESIGN FEATURES

- Modern and clean interface
- Luxury theme (dark + gold color palette)
- Easy navigation between screens
- Responsive and user-friendly layout





ADVANTAGES

- Faster development using RAD model
- Continuous improvement through feedback
- Easy to use interface
- Efficient booking process
- Secure payment integration

CONCLUSION

The design and development of the SANZZ application using the RAD model proved effective in creating a user-friendly and efficient hotel booking system. By focusing on rapid prototyping and continuous user feedback, the application ensures improved usability, faster development, and adaptability to user needs. The final design demonstrates a clear workflow, attractive interface, and reliable booking process.
