Hotel Booking App UI & User Flow Design

AIM

To design a hotel booking application interface and represent the user flow using UI screens and a flowchart.

OBJECTIVE

- To understand UI/UX design principles
- To create a structured hotel booking workflow
- To design login and room selection interfaces

TOOLS USED

- UI Design Tools (Figma / Canva / Adobe XD)
- Flowchart Tools (Draw.io / Balsamiq)

SYSTEM FLOW

1. Start
2. Login
3. Search Hotels
4. Check Room Availability
5. If available → Confirm Booking
6. Enter User Information
7. Process Booking
8. End

MODULE DESCRIPTION

1. Welcome Screen

- Displays the application name (*LuxeStay*)
- Provides options:
    - Login

WIRE FRAME:

- Explore Hotels

2. Login Screen

- Input fields for email and password
- “Forgot Password” option
- “Create Account” option
- Social login options (Google, Apple)

3. Hotel Listing Screen

- Displays available rooms based on search
- Includes:
  - Room type
  - Price per night
  - Ratings
  - “View Details” button

4. Booking Process

- User selects a room
- Confirms booking
- Enters required details
- Booking is processed

UI DESIGN FEATURES

- Modern and clean interface
- Luxury-themed color palette (gold and dark tones)
- Easy navigation
- Clear and accessible buttons

ADVANTAGES

- User-friendly design
- Quick and simple booking process
- Visually appealing interface
- Efficient navigation flow

CONCLUSION

The hotel booking application UI and user flow were successfully designed and structured using a flowchart and corresponding interface screens. The system provides a clear and logical sequence from login to booking completion, ensuring a smooth user experience. The interface design focuses on simplicity, usability, and visual appeal, making it easy for users to navigate and perform actions efficiently. Overall, this experiment demonstrates the importance of integrating user-friendly UI design with a well-defined workflow to create an effective and intuitive application.
